Lessons from 0-3 Month Olds to Analyze & Treat in Early Intervention

Suzanne Davis Bombria, PT, C/NDT

Course Objectives:

- Collect relevant information during an observational assessment of a baby
- During observational assessment determine possible treatment strategies that may be an effective foundation for intervention
- Analyze the development of the baby from 0 to 3 months and, based on this analysis, identify effective treatment strategies for babies working on these developmental components and skills
- Develop appropriate home program activities for families with babies of this age
