Introduction to Taping: Alignment and Function in the Pediatric Client

Jacqueline Grimenstein, PT, CKTP, C/NDT

Course Objectives:

- Gain an understanding of a variety of adhesive and non-adhesive materials that can be used to improve posture and alignment in the pediatric client.
- State the basic principles of using taping for the treatment/management of posture and movement problems in children.
- Understand the indications, effects on body systems and the precautions for various types of tape.
- Review key muscle groups and their relation to function and improved alignment.
