## Learning Objectives

MedBridge

*Pediatric Outcomes Toolbox: Child & Caregiver Participation Measures*

Robin Dole, PT, DPT, EdD, PCS

### Course Objectives:

Upon completion of this course, learners will be able to:

- Explain the purpose of measuring participation for children and youth with disabilities
- Differentiate child- or parent-report measures from performance-based measures
- Identify the purpose for using patient-reported outcome measures in health care practice
- Discuss the benefits and challenges to using patient-reported outcome measures within pediatric therapy practice
- Define concepts related to meaningful change in a patient-reported outcome measure
- Identify specific child- and parent- or caregiver-report measures available for measuring participation in children and youth
- Identify specific performance-based measures available for measuring participation in children and youth
- Discuss considerations for determining and interpreting change scores for measures of participation in children and youth
- Select an appropriate test for screening purposes based on elements of a case study
- Identify best practices for administration and interpretation of tests and measures for screening, prognosis, and diagnosis
- Identify best practices for sharing the results from outcome measures for various stakeholders
