

## **Learning Objectives**

MedBridge

*Promoting Upright Mobility in Young Children (Birth to 6 years)*

Venita Lovelace-Chandler, PT, PHD, PCS

### **Course Objectives:**

- Cite the evidence supporting early intervention for children with impairments.
- Explain why pain can be detrimental to development.
- Provide examples of maintaining health and promoting participation, including using the International Classification of Functioning, Disability and Health.
- Utilize recent articles and best practice guidelines to plan intervention programs to meet developmental challenges, to foster cognition, communication, and participation, and to support families.
- Demonstrate interventions to promote movement control and strengthening and to foster upright postures and mobility.
