Assessment of Motor Speech in Patients with Complex Movement Disorders

Michelle Troche, PhD, CCC-SLP

Course Objectives:

- Describe the impact of motor speech disorders on quality of life.
- Discuss Van der Merwe's framework for sensorimotor speech function.
- List the movement disorders and their impact to speech function.
- List other non-speech related impairments which might influence motor speech management in people with Movement Disorders.
- Describe the components of a comprehensive, hypothesis-driven approach to evaluating motor speech disturbance in Movement Disorders.
- Discuss the importance of properly identifying deviant speech characteristics associated with movement disorders and use these for the proper development of the motor speech management plan.
