

## **Learning Objectives**

MedBridge

*Effective Patient, Family & Caregiver Education in Rehabilitation*

Gail Sims, RN, MSN, CRRN

### **Course Objectives:**

- Identify barriers to providing effective patient/family/caregiver education.
- Describe difficulties faced by the rehabilitation nurse in assessing, diagnosing, implementing, and evaluating education.
- Understand the importance of a comprehensive process of delivering patient/family/caregiver education.
- Discuss at least three types of learning theories which are the basis of education.
- Formulate models of learning used in finding identity, meaning, and purpose.
- Identify the meaning of concepts related to learning principles.
- Discuss important assessment of learning needs.
- Describe various motivational interviewing tools in the delivery of education.
- Identify the need for patient-centered, experiential style of information sharing to promote self-management and self-advocacy.
- Differentiate between primary and secondary outcomes of effective, high quality execution of patient/family/caregiver education.
- Review evidence of sustainable results offering benefits across the health care continuum.
- Summarize evidence-based methods and techniques of teaching to remove barriers and create powerful educational plans.
