Cancer Survivorship: Treatment-Related Effects Part One

Michelle Kirschner MSN, RN, APRN-BC, ACNP

Course Objectives:

- Explain treatment-related effects of cancer therapies that are seen most frequently with surgery, radiation, and chemotherapy
- Relate the unique symptoms in the presentation of cancer-related fatigue
- Distinguish between symptoms of depression and anxiety in cancer survivors
- Cite several methods in which cancer rehabilitation is integrated into the treatment plan to decrease chronic pain after cancer treatment
- Compare the symptoms of chemotherapy-induced peripheral neuropathy with neuropathy from other causes
