Altered Dosage Form Considerations for Therapists & Athletic Trainers

Demetra Antimisiaris, PharmD, CGP, FASCP

Course Objectives:

- Explain the relationship between drug dose formulations and FDA drug administration recommendations
- Discuss examples of how altered drug dosage forms can result in patient/athlete injury or therapeutic failure
- Describe how lack of adherence to drug administration recommendations, such as mixing with various adjuvants, food, or enteral feeding formulas, may impact drug effects and therapeutic outcomes
- Explain how various environmental or physiological conditions can impact drug administration and therapeutic outcomes
- Identify ways to detect medication dose alteration and communicate with stakeholders regarding administration problems
