Transitions of Care and Medication Reconciliation: Quality Measures

Demetra Antimisiaris, PharmD, CGP, FASCP

Course Objectives:

- Describe examples of quality measures incentives that are strongly linked to medication use
- Compare the difference between traditional medication reconciliation and comprehensive patient-centered medication reconciliation
- Contrast differences amongst several stakeholder perspectives regarding medication reconciliation
- Analyze how transition of care management and medication reconciliation can impact rehospitalization
- Discuss ways to implement excellence in transition of care management and medication reconciliation in your practice setting
