Recorded Webinar: Pharmacology for Rehabilitation: Considerations for the Aging Adult

Andrew J. Opett, PT, DPT, OCS

Course Objectives:

Upon completion of this course, learners will be able to:

- Explain the principles of pharmacokinetics and pharmacodynamics as they relate to medications commonly encountered in a rehabilitation setting
- Describe normal functioning of the autonomic nervous system and how it can be altered by medications or pathology
- Discuss general classes of medications used to treat specific conditions in the body that are common in a rehabilitation setting
- List safety concerns with specific drug classes when designing a plan of care
- Identify credible sources of information that the rehabilitation professional can use for information on clinical pharmacology
