The Movement System: Syndromes of the Hip

Jared Vagy, PT, DPT, OCS, CSCS

Course Objectives

Upon completion of this course, learners will be able to

- Categorize suboptimal human movement into the movement system impairment (MSI) syndrome classification system
- Integrate key concepts from the MSI model into an International Classification of Functioning (ICF)–based treatment model that incorporates movement coordination dysfunction with mobility and muscle performance deficits
- Link posture and movement analysis of the hip with symptom modification procedures to determine movement classifications and inform clinical decision-making
- Select movement-based intervention techniques for three movement syndrome classifications of the hip
