
Learning Objectives

MedBridge

The Integumentary System for the Sports Therapist

Todd Arnold, MD

Chapter 1: Anatomy and Physiology and Skin Lesions

The online learners will:

- Understand basic function of the integumentary system
- Determine the appropriate course of intervention for various conditions
- Determine functional status and return to play criteria

Chapter 2: Infectious Diseases

The online learners will:

- Recognize the characteristics of common pathologies of the integumentary system including bacterial, viral, fungal, and their corresponding presentation of signs and symptoms
- Determine the appropriate course of intervention for various conditions
- Understand methods to prevent dermatological pathology and the prevention of the spread of infection
- Determine functional status and return to play criteria

Chapter 3: Environmental Exposure and Contact Dermatitis

The online learners will:

- Recognize the characteristics of common pathologies of the integumentary system including mechanical disorders and their corresponding presentation of signs and symptoms
- Determine the appropriate course of intervention for various conditions
- Determine functional status and return to play criteria

Chapter 4: MRSA

The online learners will:

- Recognize the characteristics of MRSA and its corresponding presentation of signs and symptoms
- Determine the appropriate course of intervention for MRSA
- Understand methods to prevent dermatological pathology and the prevention of the spread of infection

-
- Determine functional status and return to play criteria
